Brief Autobiography :

Chung-Der Hsiao is associate professor of Chung Yuan Christian University for Department of Bioscience Technology. He completed the undergraduate and graduate education in National Taiwan University. For postdoctoral training, he joined Dr. Pung-Pung Hwang's group at ICOB, Academia Sinica, and worked on fish physiology and bioinformatics. By 2007, Chung-Der was recruited by Chung Yuan Christian University and established his own laboratory, where he used state-of-the-art transgenic methods to generate many zebrafish disease models like apoptosis, obesity, skin cancer and aging. From 2012, Chung-Der was invited by GeneTex International Corp, Zgenebio Biotech and Taikong Corp as research consultant to initiate several cooperation projects on developing zebrafish antibodies, TALEN/CRISPR genome editing tools, transgenic fish as well as Next Generation Sequencing technologies. From 2013, Chung-Der was promoted as associate professor of Chung Yuan Christian University. Chung-Der is author of over 60 high impact journal articles. He is frequently invited to talk at international and local conferences across a diverse range of fields, and has also spoken to school, student and public audiences. His research has strong application potentials and several patents have been issued regarding to use zebrafish as a human disease models.
